

INTERNET

WebRoutes

WebRoutes

WebRoutes are available via the Track Access Route Learning Platform website. Visit the site and play routes in WINDOWS, FLASH or MP4 format. User login provides secure access to industry areas. A good internet connection and computer are required, some routes are up to 100Mb. Internet delivery provides a single point solution and ensures latest route information is always available. Downloaded routes can be stored and played from the local cache. The Route Learning Platform website also features interactive shunts, route maps and computer based training. The site is hosted by the Track Access server which is a great place to share route safety training information.

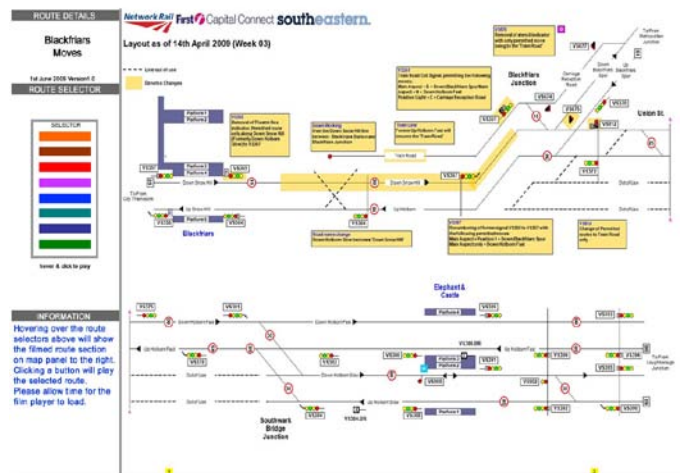

TRY IT ONLINE NOW

Login is not required to try site in public area, if your TOC logo appears call us for username and password login details.
